ABSTRACT

Volume III of a study of the Education Professions Development Act (EPDA) training programs for higher education personnel presents the second of a three-faceted approach to assess current needs. This document reviews the task of profiling EPDA V-E training programs to produce a small-scale information system. Section one reviews the profiling task in relation to the format, the survey of EPDA V-E graduate fellows, a summary of program profiles, and the user package. The second section indicates general conclusions. Section three indicates the procedures of the profiling activity. Appendices include the computer output for institute programs and 2-year fellowship program, a list of variables, a code book and user guide, and a listing of program creation. Related documents are HE 004 329, HE 004 330, and HE 004 332. (MJM)

0.0 INTRODUCTION

Part V-E of the Education Professions Development Act authorizes the Office of Education to fund training programs to prepare persons to serve as professionals in institutions of higher education. Since Fiscal Year 1969, when the first of the EPDA V-E grants were made and the first wave of programs initiated, the Division of University Programs (responsible for administering fellowship programs) and the Division of College Support (responsible for the institutes' short-term training programs and special projects) have accumulated an enormous mass of data about programs and participants. Yet administrators have not had easy access to these data and have been able to produce reports on the accomplishments and activities of the programs only through costly and time-consuming searches through their files.

Many of the data contained on the program application and award forms are entered on the EPDA V-E Subsystem tape. However, this subsystem does not have the information retrieval capability administrators need. Thus, the task of developing a system for storing, displaying and summarizing key information from the program files was included in this study as a means of gaining an overall picture of the activities and accomplishments of EPDA V-E training programs.

1.0 THE PROFILING TASK

The task of profiling EPDA V-E training programs was intended to produce a small-scale information system for the use of program administrators. Using information contained in national program files and data gathered through a survey of participants in fellowship programs, the system was to summarize policy-relevant information on both programs and participants in order to allow administrators both of institutes, short-term training programs and special projects (all of which will hereafter be referred to as "institute programs") and of fellowship programs to have an at-a-glance picture of a given program's activities, as well as a summary of the performance of a number of programs. To accomplish this end, the profiling task was divided into four sub-tasks, each fulfilling one of the objectives of the overall task.

1.1 The Program Profile Format

Basically, the information system consists of two parts. The first is a series of one-page program profiles summarizing selected data on individual programs and their participants, and the second a summary across programs of the information contained in the individual profiles. The profiles display key variables in each of five information categories: (1) basic program data identifying the program, its content area and overall training objectives; (2) institutional data, naming and classifying the host institution; (3) cost data; (4) participant data, including demographic characteristics and career intentions; and (5) response data, showing the reaction of both participants and field readers to the program. Thus, by reading an individual program's profile, an administrator can tell what kind of school received the grant; what kinds of people were trained; what they were trained to do; whether or not their stated career objectives match those of the program; and finally, how favorably participants and field readers perceived the program.

It was our original intention that both institutes and fellowship programs would be handled simultaneously by the profiling system. However, as work progressed and the many differences between the two kinds of

programs became more apparent, it seemed more reasonable to design separate, though similar, systems. Thus, the entire EPDA V-E profiling system consists of two computer programs. One profiles and summarizes fellowship programs, and the other profiles and summarizes institutes, short-term training programs, and special projects. This procedure allows for the separate use of its components by the administrators of the two kinds of training programs. Results of the summary portions of each of the computer programs can be combined. The exact nature of, and rationale for, each of the variations in both the profile format and summary tables are discussed in Section 3.0 of this volume.

1.2 The Survey of EPDA V-E Graduate Fellows

All of the information contained in the profiles was excerpted from the national program files with the exception of certain information on participants in the fellowship programs, collected through a mail survey of EPDA V-E graduate fellows. The instrument used for this survey consisted primarily of questions--selected for inclusion in the profiles--from the regular reporting forms filled out by participants in the institutes. Three categories of information (not included on the Application for Graduate Fellowship form filled out by all fellows) were represented on the questionnaire: (1) demographic data, (2) data on the fellows' education and career objectives and the role of EPDA V-E funds in the formation of these objectives, and (3) data on their reaction to the training received through the fellowship. The survey was administered by mail to some 375 participants in fifty 1970-71 two-year fellowship programs, thereby censusing the entire population of continuing fellows at the time it was conducted.

1.3 Summary of Program Profiles

In order to facilitate comparison of EPDA V-E accomplishments with national priorities, formats were developed for summarizing the program profiles. As has already been mentioned, the summary tables follow the profiles and show the distribution of both programs, participants, and

institutions funded across various categories of information relevant for making policy decisions.

1.4 The User Package

The purpose of the profiling task was to provide the Office of Education with an information system for use by EPDA V-E program administrators. In keeping with this objective, Abt Associates has designed profiling and summary computer programs which can easily be used on an on-going basis. The user package contains the following five components:

(1) Two nearly identical Program Decks, one which profiles and summarizes institute programs, and the other which handles the fellowship program;

(2) A Users Guide which describes the inputs and outputs generated by the program, and contains instructions for packing the data deck and modifying the format of the summary tables;

(3) A listing of all Profiling Variables by their location on the profile format;

(4) The Profiling Input Codebook which contains a complete list of all input data by card and column number, identifies the location of the data by source, and gives instructions for coding these items;

(5) Finally, the computer program designed to read the EPDA V-E Subsystem tape and enter the necessary items on the appropriate cards.

These materials enable program administrators to update the existing profiles as new programs are added, old ones deleted, or new information received.

2.0 GENERAL CONCLUSIONS

While the distribution of sampled programs and responding participants cannot be assumed to represent either all EPDA V-E training programs or the entire participant population, examination of the summary statistics (contained in the Appendices to this volume) yields a detailed impression of the nature of EPDA V-E training programs, and the characteristics of both the people whom they train and the host institutions. Moreover, such an examination yields a clear idea of what kinds of accomplishments can be expected of the programs and an understanding of the kinds of questions that can legitimately be answered by the data available in national program files.

2.1 Limitations of the Data

Since essentially all data to be entered in the profiling system had to come from national program files, the system's capacity for generating valid, reliable conclusions depends on the quality of the information contained in the files. Unfortunately, we encountered a number of constraints, the most serious of which centered around the lack of valid measures of effectiveness, and the questionable accuracy and generalizability of the data available. Section 2.1.1 enumerates problems resulting from the absence of measures of success. Section 2.1.2 discusses our reservations about the accuracy of the data.

2.1.1 Absence of Measures of Success and Quality

The accomplishments of any training program can be measured through knowledge of what happens to participants after their training. Do they find and keep the kinds of jobs for which they were trained? Or are the wrong kinds of people trained? Or are their credentials inadequate for other reasons? Or do no openings exist for these positions? Does the training provided help them do their jobs better? Or is it inadequate? Or useless?

Unfortunately, answers to these and related questions are not available in the EPDA V-E files. Instead, we know only whether participants stated they intended to pursue careers in higher education, and if so, in what capacity and at what level of IHE. But we have no idea how many did what they intended, or would have done so had they had the right credentials or had the jobs been available. Furthermore, for those who were successful finding jobs, we have no idea whether the training proved useful or even adequate.

Lacking these kinds of follow-up data, we must settle for using career intentions and participant ratings not as measures of individual program or overall EPDA success but only as gross indicators of problems. If large numbers of respondents do not intend to pursue careers in higher education or do not intend to do what they were trained for, or if large numbers rate the programs low, we can assume that the programs or program in question may not be effectively meeting objectives.

Participants are not the only group, however, to rate program quality. Field readers, who review the program proposals, are also asked to do so, and the profiles include the average of their summary ratings. This variable also can be considered an indicator of trouble, but it is at best an inconclusive one. In the process of collecting this information, we noticed that all the field readers for a given program frequently gave identical ratings and worded their comments almost verbatim--casting some doubt on the validity of these ratings.

Another area of weakness is the difference between number of participants approved and the number actually trained. The two are not necessarily identical and cannot be assumed to be. Thus, the available data suggest how one of EPDA V-E's most important resources (i.e., training slots) was allocated. But they do not indicate how many people actually received what kinds of training, or which programs or kinds of programs experienced difficulty in filling training slots, and both of these considerations are important and valid measures of effectiveness.

2.1.2 Data Accuracy and Completeness

Had these been the only problems encountered, the profiles might have lacked valid measures of effectiveness and quality, but they would at least have been accurate and complete. Unfortunately, however, the frequency with which data were missing or inaccurate even further limits profile utility. Although our primary source of information was the EPDA program files, many of the program data selected for inclusion were to be taken from the EPDA V-E Subsystem tape. Approved program cost data were so frequently found missing that we finally resorted to collecting these by hand. Although the "requested" cost figures were almost always available, in several instances they vary by a factor of ten from approved figures which we checked and double-checked for accuracy. This seems an unrealistically high variance.

Furthermore, we have identified two errors in the coding of program type. This variable is not easy to code even from the primary source (Program Application Form), so perhaps it is not surprising that according to the tape there were no short-term training programs and that eight of the two-year fellowship programs sampled were identified as one-year programs. While these errors themselves may not be serious, they shed sufficient doubt on the accuracy of the tape-stored data so as to make it impossible for us to recommend continued use of the tape.

Inaccurate and missing data were not restricted to the information on the Subsystem tape. Instances of both were found in the data collected manually. The item most frequently missing or evidently wrong was the number of normal workweeks approved. The definition of this term is the number of normal workweeks actually spent in training per participant; the item should not be confused with "program length in weeks." Apparently, however, this is a source of some confusion to program directors. Often the entry is too high--for example, 48 weeks--to be considered a reasonable length for a program that should be the equivalent of one or two graduate level courses. Since this item is used to calculate cost

per participant week, errors in recording generate a double disability.

Of all the instances of incomplete data, the most glaring and most detrimental was the frequency with which the Participant Application and Evaluation forms--containing the participant data for institute programs--were missing. With 4,643 participants approved in these programs, there were only 2,177 respondents. It has already been established that the number trained (and thereby the number of potential respondents) may be considerably less than the number approved, so it is impossible to calculate the non-response rate. (Through the Fellows Survey we do know, however, that the difference between the number of fellowships approved (414) and the number of fellows actually enrolled in training (365) is 88%, and that of those trained, some 85% responded.) Nevertheless, non-response weakens the utility of participant data, particularly in combination with the absence of follow-up data. For example, we can attempt to estimate program effectiveness in meeting personnel needs by examining the career intentions of participants. In the case of institute programs, however, these intentions are not known for many participants, since the variables available are only gross indicators of success.

As a result of these weaknesses, the profiling system is primarily descriptive. It can provide a fairly accurate picture of the training objectives of funded programs, the kinds of schools hosting the programs, the amount of resources devoted to service of disadvantaged populations, and variations in program cost. In addition, it provides some indication of success and quality. Finally, it facilitates comparisons among fellowship and institute programs.

2.2 Summary of Findings

2.2.1 The Character of EPDA V-E Training Programs

Part V-E of the Education Professions Development Act sponsors training for professionals in higher education through five types of programs: (1) institutes, (2) short-term training programs, (3) special

projects, (4) one-year fellowship programs, and (5) two-year fellowship programs.

The first three, which are administered by the Division of College Support, are alike in the following ways: (1) they are all short-term, lasting an average of fewer than ten weeks;* (2) no degree is earned by virtue of participation in them; (3) they are outside the normal course offerings of the host institution; (4) they are funded through grants made directly to the host institution to cover all or part of the associated costs of giving the program. These costs include program administration, faculty, facilities and participant stipends. Among the ninety-two institute programs we examined, the training grant typically covers about 90 percent of these costs.*

Fellowship programs, on the other hand, may last either one or two years, and except in unusual circumstances, terminate with the award of a graduate degree. The methods of funding the two types of programs vary greatly. The institution hosting the program, which is usually a regular course of study within one of its graduate departments, is assigned a specified number of fellowships which it may then award to graduate students taking the course of study for which federal support was sought. These students are paid directly by EPDA (through the Division of University Programs) $2,400 during their first year and $2,600 during the second. The host institution receives $2,500 a year cost of education allowance for each fellow. Thus, the total cost to EPDA V-E of a participant in a fellowship program is either $5,000** in one-year programs or $10,000** in two-year programs, and varies only in a direct relationship with program length. [On the other hand, the cost of training participants (as measured by cost per participant per week) in institute programs varies tremendously from program to program.***]

---

* See Appendix A.2, Table A.

** These figures exclude dependency allowances, which average $400 a year for one-year fellows and $500 a year for two-year fellows.

*** See Tables F.1 through F.4, which show variation in cost per participant per week.

In addition to these differences in the nature of the programs, there are also differences in the kind of services they provide and the ways in which they make these services available. First of all, fellowship programs apparently provide more training to a smaller group than do institute programs. And the average federal expenditure per program is lower for institute programs.

Table 1*

Average Program Size and Cost

	Institute Programs	Two-Year Fellowship Programs
Number of Participants Approved	51.57	8.28
Total Funds Awarded**	$59,829	$82,800

Table 2*

Variation of Program Size and Cost

	Institute Programs		Two-Year Fellowship Programs	
	From	To	From	To
Number of Participants Approved	6	300	4	27
Total Funds Awarded**	$ 8,549	$271,435	$40,000	$270,000

* Compiled from Table A in the Summary Tables for each of the two program types (See Appendices A.2 and B.2).

** For two-year fellowship programs, this is computed by multiplying the number of participants awarded by $10,000.

The statistics in Table 2 reflect a second difference in the two types of programs, namely that institute programs tend to be much more flexible than fellowships. As anyone familiar with EPDA V-E activities knows, the short-term programs vary considerably in format, and as the results displayed in Table 2 indicate, their variability as to cost and size is also much greater than that of fellowship programs.

A third difference between the programs is in their relative ability to provide incremental direct aid to various kinds of IHEs. The training grants are a form of incremental assistance to the host institution. Thus since fellowships are almost always at universities, and the proportion of non-white or developing schools is lower among universities than it is among two-year and four-year colleges, institute programs can more readily provide this incremental assistance to developing and non-white schools than can fellowship programs. The fact that only three of the institutions hosting fiscal year 1971 two-year fellowship programs were predominantly non-white, while ten of those hosting institute programs were, supports this thesis. Moreover, nearly 30 percent of the institute programs were hosted by developing institutions while only 6 percent of the fellowship programs had developing host institutions.*

Finally, the institute and fellowship programs differ in the kinds of people who participate in them. Since institutes offer no degree and last only a short while, and since the training they offer is the equivalent of one or two graduate-level courses, they are best suited to offering in-service training. Fellowship programs, on the other hand, are better able to provide pre-service training, since a graduate degree is usually one of the prerequisites of employment as a professional in institutes of higher education. Because of these differences in the training offered, participants in institute programs are more likely to have had prior professional experience in higher education and to hold

---

* See Table E.1 in Appendices A.2 and B.2.

graduate level degrees than are participants in fellowship programs. The data summarized in Table G.2 in Appendices A.2 and B.2 support this thesis. Nearly 75 percent of the respondents in institute programs held graduate degrees and had had professional experience in higher education prior to EPDA V-E training, as compared with fewer than 10 percent of responding fellows. Thus, institute programs are somewhat better suited to helping higher education professionals update or add to their skills, while fellowship programs are more likely to bring new blood into the system.

2.2.2 Overview of EPDA V-E Training Activities in Fiscal Year 1971

One hundred forty-two training programs (excluding one-year fellowship programs) were sponsored by EPDA V-E in fiscal year 1971. These programs were allocated over five thousand participants and represented a total federal investment of over $9 million. The breakdown by program type of the number of programs, number of participants approved and total federal expenditure are shown below.

Table 3*

Summary of Training Activity
by Program Type

	Number of Programs	Number of Participants	Total Federal Funds
Institute Programs	92	4,643	$5,006,489
Two-Year Fellowship Programs	50	414	$4,140,000
Total	142	5,053	$9,146,489

* Summarized from Series B Tables in Appendices A.2 and B.2.

** Calculated at $10,000 per participant.

The reported objectives of these programs, as indicated in both sets of Series C tables, show a concentration of effort on training teachers and training persons for service in two-year colleges. These trends, particularly the first, were somewhat stronger among the fellowship programs examined than they were among institute programs. However, in both cases the distribution of training resources among the various occupational categories is uneven. The extent of the concentration on teachers and two-year colleges (half the programs shared the latter objective) may well reflect the realities of the higher education job market, at least as it is perceived by host institutions. For example, what might at first be construed as a low level of interest among fellowship programs in training education specialists and administrators is in fact a result of the fact that these personnel traditionally come up through the ranks. EPDA V-E has had little influence in reversing this trend.

In addition to training persons for a specific institutional level and occupation, EPDA V-E programs may also be designed specifically to prepare persons to work with educationally and socioeconomically disadvantaged populations. Seventy-five of the programs studied, representing an approved participant population of nearly three thousand and a total federal investment of $5,219,055, were in fact so designed, using well over half the training resources expended in fiscal year 1971. Although there are no direct measures of the performance of these programs in this area, the fact that nearly all the minority respondents were participants in such programs and that of the ten non-white institutions hosting institute programs, eight hosted programs for the service of disadvantaged populations, may be considered a positive feature, inasmuch as the so-called "disadvantaged" programs thereby increased considerably both the direct and indirect aid to disadvantaged or minority populations and institutions. Across all programs, EPDA achievements in providing direct aid to disadvantaged populations were (as indicated in Table 4): nearly a quarter of the programs and federal funds went to non-white and/or developing institutions, and some 23% of all respondents were reported as being minority group members.

Table 4*

Direct Aid to Minority Group Members and Institutions

	Programs Hosted by Developing or Non-White Institutions		Amount Awarded to Such Institutions		Minority Respondents	
	Number	% of All Programs	Amount	% of All Funds	Number	% of All Respondents
Institute Programs	27	29% (n=90)	$1,698,782	34%	403	20% (n=2,000)
Fellowship Programs	3	6% (n=50)	$ 454,000	11%	69	23% (n = 304)
All EPDA V-E Programs	30	21% (n=140)	$2,152,782	23%	472	20% (n=2,304)

* Taken from Tables E.1, E.2 and G.1 in Appendices A.2 and B.2

2.2.3 Participant Characteristics

Of the 2,038 participants in the respondent group, some 700 were female. Interestingly enough, however, nearly half of these women (representing over half of the fellows responding) participated in fellowship programs. This extremely uneven distribution may indicate a non-response bias, but it is also possible that it actually reflects the composition of the two participant populations (these figures are summarized in Table 5).

The respondent populations differ from institute to fellowship programs both in terms of their minority status and sex and, as discussed earlier, in terms of their educational and experiential backgrounds as well. What is probably of much greater significance, however, is the apparent lack of variation in their reported intent to pursue higher education careers. Over 90% of the respondents in both kinds of programs answered this question affirmatively, which proves the efficacy of the training and signals that probably most or nearly all of the EPDA V-E trainees do intend to pursue careers in higher education. Tables H.2 and H.3 in Appendices A.2 and A.3 provide additional data regarding respondents' career plans, including a breakdown by occupation and institution level. The most interesting participant data, however, contained in Tables H.4 and H.5, show the correspondence of trainees' goals and program objectives.

Results of these tables are combined here in Table 6. This table, which was compiled by counting entries only in those cells where a match between program and participant objectives occurred, shows several interesting trends.

First, of all the occupational categories for which training was provided, education specialists had the lowest percentage of match with participant objectives in both types of programs. This phenomenon, in combination with the fact that very few programs were geared toward training education specialists, presents something of a challenge to

Table 5*

Summary of Minority Status and Sex

	Female			Male			Percent	
	Minority	Non-Minority	Total	Minority	Non-Minority	Total	Male	Female
Institute Program	174	380	554	229	951	1180	68%	32%

* Taken from Table H.4 and in both Appendices A.2 and B.3.

EPDA's ability to meet the need for training these personnel. Given the traditionally ad hoc route through which people become education specialists and the nature of EPDA V-E programs, EPDA seems to be left with a limited set of alternatives: first, fellowship funds could be diverted to creating a new generation of degree-granting programs to replace the ad hoc route, a strategy which was used successfully in the generation of graduate degree programs in education research. Or, institute monies could be similarly concentrated on the programs designed to retrain teachers or administrators for positions as education specialists. Both of these strategies bear the implicit drawback, however, of requiring heavy national program commitments, both in terms of financial contribution and active campaigns to generate grant applications. Another option open to EPDA is to withdraw altogether from the training of education specialists or to continue its present--and seemingly sporadic--pattern of funding programs in this area.

Another phenomenon which Table 6 demonstrates is the tendency of fellows to be sure of their occupational objectives and unsure of the kind of institution in which they want to serve. This pattern is exactly reversed for participants, over 90% of whom took their occupational training in fields other than the one in which they intended to serve. While these patterns are not at all surprising (fellows, after all, have only rarely held positions as IHE professionals, while many participants may well wish to update their skills by broadening them into new areas), they do raise several questions that may be worthy of further investigation. Should occupational distinctions be the only method used for classifying both the training objectives of participants in EPDA programs and of the programs themselves? What real, and to date unquantified, benefits are derived from training people to serve in occupations and/or institutions other than the ones in which they intend to serve? Should overall EPDA goals be restated?

2.2.4 Response to the Programs*

In both institute and fellowship programs, respondents intending to pursue IHE careers consistently (with the single exception of quality of staff in institute programs) gave higher ratings than those planning non-IHE careers. That the perception of quality and applicability of training would be so closely related to career intentions is not a surprise. Variations in degree of satisfaction--as reflected in the ratings--indicate that participants seem more likely to be pleased with the training received than do fellows, and that special projects are received more favorably than are institutes. In addition, programs hosted by four-year undergraduate colleges were rated more favorably than those at other levels, particularly junior colleges, which seem to have run the least satisfactory programs. Finally, while respondents in institute programs rated quality of staff either "excellent" or "very good" more frequently than they did either quality of curriculum or quality of facilities, the frequency with which fellows gave high ratings showed almost no variation depending on the aspect of the program being rated.

As consistent as these patterns are in the data available, there are, of course, no grounds on which to assert that they would be maintained if non-respondents' ratings were available. In fact, we suspect that the availability of non-response data would drastically alter the proportion of high ratings, particularly among institute programs. It is not unlikely that programs receiving low ratings might have withheld their Participant Evaluation forms or that participants (including fellows) with strong negative feelings would fail to respond at all. As the data now stand, "excellent" and "very good" ratings usually account for at least half or nearly half the ratings given.

---

* This discussion is based on Series I through K in the Appendices A.2 and B.2.

2.2.5 Variations in Cost Per Participant Per Week in Institute Programs

Probably one of the foremost concerns of any training program administrator is whether some kinds of training cost more than others. Using cost per participant per week as the unit of measure, tables in the F series (which applies only to institute programs*) show the variation in the cost of training participants in institute programs. Unfortunately, the incidence of missing data was particularly high for the cost variables needed to compute cost per participant per week (CPW), so the results of this analysis are probably even less conclusive than they appear. One thing that seems to be apparent, however, is that special projects are likely to be significantly more expensive than other institute programs. Average CPW for these projects was as high as $823, while its maximum value for institute programs was $235. Oddly enough, variation of CPW depending on the size (i.e., number of participants approved) of the program, does not follow a consistent pattern, as Table 7 demonstrates.

2.2.6 The Influence of EPDA V-E Fellowship Funds

One of the issues raised earlier in this section was that EPDA V-E fellowship funds have the potential for influencing people to pursue professional careers in higher education, by providing financial assistance to support the required graduate-level study necessary for securing such positions. However, depending on the way that host institutions award their fellowships, the money can instead be used to influence people (regardless of whether or not they intend to pursue careers in higher education) to take their graduate work at that institution rather than at another.

The data in Series M tables (Appendix B.2) show that only sixty-four of the respondents knew about the availability of EPDA V-E funds prior to deciding which school to attend, and of these half were influenced in

---

* Since cost per participant per week does not vary from one fellowship program to another, it was not included on the fellowship profiles. Based on a 40-week school year, CPW for two-year fellows would be $125.

Table 7*

their choice of school by this knowledge. However, nearly all (thirty, in fact) of these people reported that they intended to pursue a career in higher education. Twenty-two others who knew about EPDA funds were influenced in their choice of an IHE career by this knowledge.

In addition to influencing these people's choice of career, EPDA V-E also exerted some influence over the career decisions of some 109 fellows who modified their career plans after learning about the availability of these funds. However, twelve of these fellows no longer intended to pursue careers in higher education at the close of their second year of study. In summary, of 273 fellows who intended to pursue IHE careers, 119 were in some way influenced by EPDA V-E in their choice of career. This statistic alone signals a remarkable achievement on the part of EPDA V-E fellowship programs.

3.0 PROCEDURES OF THE PROFILING ACTIVITY

3.1 Program Profiling

3.1.1 Basic Design Considerations

From the outset our goal was to design a system for summarizing information already existing in the national program files. Administrators of both fellowship programs and institutes had expressed repeatedly their need for such a system, and indeed already had in their files a wealth of data to which they had only limited access. We began the task with an examination of the application and reporting formats, followed by a thorough examination of a sample of complete program files. It was at this point that we were first impressed by the limited comparability of fellowship and institute programs. Further, we became convinced of the need to rely solely on the objective data available in the files. The narrative statements attached to the program application forms and the Director's Final Report (available only for institute programs) varied so much in content and quality as to render the development of codes infeasible. Weaknesses in the data files, such as the absence of follow-up data on program participants and of reliable and valid measures of program success, were also recognized at this time and became critical factors in our selection of variables for inclusion in the profiling system. Rather than enumerate these limitations again, we refer the reader to Section 2.0 of this volume.

Variables in five general categories were selected for inclusion in the profile format (sample copies follow), which therefore was divided into five sections. Each section contains all the variables of a given category. A sixth "capsule" section isolates several key variables and displays them in the upper right corner of each profile for quick identification summary.

Once we had selected the variables and categories of variables for inclusion in the profiles, the design of the actual format could begin. It

was our belief that the utility of the profiles would be enhanced by brevity and uniformity. The national files contain a considerable amount of information about each program, and administrators have only to go to the files to have access to this information. Yet nowhere are there concise, policy-relevant statements about the programs. If such statements existed, and were ordered with care and uniformity, administrators would have to do little more than flip through them to find out what they needed to know. We decided, therefore, that a given profile should take no more than a single page of computer output, and that a given variable should have the same location on each profile. Thus, the profiles were given a tight, quickly readable format.

3.1.2 Summary Description of the Variables Included

Basic Program Data: This first section of the profile identifies the program by number, status (new or continuing), content area, program type, and training objectives (stated in terms of the positions for which persons are being trained and the kinds of training institutions). The beginning and ending dates of the training program are also given for institute programs, and for fellowship programs the degree awarded is noted. Also contained in this section is a statement as to whether or not the program is "specifically designed to prepare persons to work with educationally and socioeconomically disadvantaged persons." For those programs that are so designed, the primary target group is also indicated.

Institutional Data: Here the host institution is identified by name, type (or level) and location. In keeping with the expressed concern of the Office of Education to provide direct aid to institutions which are non-white and/or developing, we have also included these two institutional characteristics: predominant ethnic group, white or nonwhite; and institution status, developing or non-developing. This information, not on record in individual program files, was collected from lists made available to us by the Division of College Support.

Program Cost Data: In this section, Table 1 displays the number of participants, the number of normal workweeks, the amounts of the total grant and non-federal contribution, and the cost per participant per week, both as requested on the program application and as approved by the U.S. Office of Education.

It is in this category of variables that one of the major differences in the format for fellowship and institute programs appears, since the only entry for fellowship programs is the number of participants approved. Cost varies considerably among institute programs; the method of funding fellowship programs makes cost a constant. For each fellowship awarded, the breakdown of federal expenditures is as follows:

	One-Year Programs	Two-Year Programs
Total Cost of Education Allowance	($2,500)	($5,000)
First Year	2,500	2,500
Second Year	---	2,500
Total Awarded to Fellow	($2,500)	($5,000)
First Year	2,500	2,400
Second Year	---	2,600
Total Federal Expenditure/ Fellowship	$5,000	$10,000

Thus, to arrive at the total cost/fellowship program, one simply multiplies the number of fellowships awarded by $5,000 for a one-year program, or by $10,000 for a two-year program.

Participant Data: In this and the following section are tabulated the results of the application and evaluation forms completed by participants in institute programs, and the results of the fellows' application forms and survey questionnaires. Therefore, in considering the results

which appear in these sections, the reader should bear in mind that the only information available was that provided by these respondents. He should further consider the distribution of responses in light of the fact that for a given characteristic there was no way of reliably generalizing from respondents to all participants.

Table 2, which appears at the beginning of this section, shows the breakdown of respondents by sex and ethnic background. It should be pointed out here that for reporting purposes and for the survey of fellows we used a different classification scheme for ethnic background than the one used on Office of Education Participant Application forms. This was done primarily to save space and to better conform to the ethnic scheme used to designate target groups. The changes we made in the scheme were (1) to collapse into a single category--namely, "Spanish-speaking"--Cuban, Mexican-American, and Puerto Rican respondents; and (2) to include Oriental in "other minority." These data were coded from the participant forms, in keeping with these changes.

Following Table 2 are breakdowns of respondents across three additional characteristics: (1) highest degree held; (2) prior professional experience in an institution of higher education; (3) the number of respondents intending to pursue a career in higher education; and (4) the number of those so intending who also planned to enter full-time graduate study immediately after completing the program. The rationale for including the fourth variable as a sub-set of the third is as follows. The primary concern of program administrators is the number of people who actually enter careers as professionals in higher education. If a given participant does not intend to do so, his post-EPDA education and career activities are of no import. What happens to those people who do enter careers in higher education following completion of their EPDA training is of great concern to the Office of Education, which must consider anyone entering full-time graduate study at this point as being delayed in actually obtaining a position in an institution of higher education. Unfortunately these very critical career data are available only in terms of participants' intentions,

and very little is known about the number of persons who have actually entered careers in higher education.

It is at this point that the institute and fellowship program profiles vary for the third time. On fellowship, but not institute profiles, the statements discussed above are followed by a series of statements which are designed to classify the role played in career and education decisions by the availability of EPDA V-E funds. For those who knew about EPDA V-E funds in advance of choosing the institutions where they were studying, the influence of EPDA money can be classified as follows:

- To the extent that individuals chose schools for financial reasons, the benefits of EPDA V-E money can be considered to be accruing to individual institutions;
- To the extent that individuals' career choices were influenced by knowledge of EPDA funds, we can consider that EPDA monies are successful in influencing people to enter careers in higher education;
- On the other hand, to whatever extent neither decision was influenced by this knowledge, EPDA can be considered to have no influence.

For those who did not know about EPDA money in advance of choosing graduate institutions,

- Only those who modified their career plans when they found out about these funds can be considered to have been influenced by EPDA.

Obviously, it is desirable for EPDA funds to influence a high proportion of career choices and career modifications decisions.

Table 3, "Reported IHE Career Plans," appears next on both sets of profiles. It categorizes respondents' stated career goals by the positions they intend to hold, and by the level (i.e., two-year junior or community college, four-year undergraduate college, or graduate and undergraduate university*) of the institution of higher education. It should be pointed

---

* Underscoring denotes the terms which actually appear on the profile formats.

out here that data on this table are likely to be somewhat more reliable for participants in "institute programs" than for fellows, since many of the participants were actually employed by an IHE, while most fellows had not had any prior professional experience in an IHE.

3.1.3 Response to Program

Although the files on "institute programs" contained responses to the program from a number of sources (field readers, site visitors, program directors, and participants), the only responses consistently available in codable form and replicable for fellowship programs were those made by program participants and the field readers who critiqued the applications submitted by institutions.

Participants in "institute programs" were given an opportunity to express their impressions of the program on the "Participant Evaluation Form," which required them to rate the quality of the program along a number of dimensions using a five-point scale. From these dimensions the three (quality of curriculum, quality of staff, and quality of facilities) which seemed the most critical for program success and the most easily controlled by program administrators were selected for inclusion here. Because fellowship programs are actually graduate programs which either are or become part of established graduate school curricula, and which have received the approval of the Office of Education and been allocated a specified number of fellowships, administrators of these programs have only very limited interest in and indirect control over the quality (especially as perceived by the graduate students) of the curriculum, staff and facilities of a given program. For fellowship programs, therefore, we selected a different series of dimensions, which seemed more closely to represent the expressed concerns of program administrators: applicability of course work, applicability of internship, and overall program quality.

From the several ratings made by field readers of both types of

programs, we selected for inclusion only the average of their summary ratings. This was done primarily because our review of data files indicated that for most proposals variation in responses from field reader to field reader and within the responses of a single reader was minimal. It should be pointed out here that although both field readers and participants (including fellows) were asked to use five-point scales, the verbal interpretations given each are reversed, as the table below indicates:

Rating Scale

Participants' Meaning	Numeric Value	Field Readers' Meaning
Outstanding	1	Unacceptable
Very Good	2	Poor
Good	3	Adequate
Adequate	4	Good
Poor	5	Excellent

3.1.4 Selection of the Programs to be Profiled

The EPDA V-E programs profiled include all 1970-71 institutes, short-term training programs and special projects as well as all graduate programs awarded two-year fellowships in 1970-71. The profiling therefore produces a rather complete picture of the activities of EPDA V-E for an entire fiscal year and thereby demonstrates well the capabilities of the information system.

3.1.5 Implementation

The actual implementation of the system involved two major phases of activity. The first was the design, writing and debugging of the computer programs which would generate the profiles. This process was

carried out from start to finish to generate profiles of "institute programs," and then was adapted to do the same for fellowship programs. A master codebook listing each variable by its location in the system was also written as part of this work.

The second phase of implementation activity was that of assembling necessary input data. Depending on their source, data were collected in three more or less independent operations. As is discussed at some length in Section 2.0 of this volume, the Office of Education provided us with a copy of the "Part E Subsystem Tape," which contained much of the program-specific information we required. A computer program was written to read this tape and print the cards in the format designated in the Codebook. The remainder of the program data, all of the participant data for the "institute programs," and those available for participants in the fellowship programs were collected, coded and punched manually. To this end coding sheets were designed specifying the required data bits to be coded and their exact location (by form and question number) in the files. Reference was made earlier in this section to the fact that two institutional characteristic variables not available in these files were required. These items were collected, coded, and punched as part of this operation. The third operation involved in assembling the necessary data was the conduct of the Fellows Survey (to which Section 3.2 of this volume is devoted). It is sufficient here to say that once received, responses were matched with the correct "Application for Graduate Fellowship" form, and information from both was then coded and punched.

Once all the input data were assembled, the profiling computer programs were run and further debugged, ultimately producing the sets of program profiles appended to this volume.

3.2 The Fellows Survey

The necessity to conduct a survey of EPDA V-E graduate fellows grew directly out of the information needs generated by the profile formats. As

a matter of course, all graduate EPDA V-E fellows are required to submit to USOE an "Application and Nomination for Graduate Fellowship" (BOE No. 51-RO441). Information contained on this form is used to administer fellowship funds to both NDEA and EPDA graduate fellows and only incidentally constitutes part of the file of a given EPDA V-E program. Although two of the basic demographic items needed for the fellowship profiles are available on this form, the rest of the participant-specific data called for by the profile format were to be collected through a survey which in fact constituted one of the three data assembly efforts of the profiling activity (described in Section 3.1 of this volume). Because nearly all of the information collected through the survey was used to feed the profile system, its results are tabulated program-by-program in the "Participant Data" and "Response Data" sections of the profiles of fellowship programs and on an across-program basis in the summary tables and cross tabulations (described in Section 3.3 of this volume).

3.2.1 Target Universe

The target universe for the survey was defined as all those "experienced fellows enrolled at the time of the survey in EPDA V-E programs. The term "experienced" was further defined as referring to recipients of 1970-71 two-year fellowships,who would have been half or three-quarters finished with their second year of fellowship funding at the time the survey was originally scheduled for fielding.

This definition of target universe allowed us to reach those fellows who were closest to program termination in terms of the percent of EPDA-funded training already completed. We thereby duplicated as nearly as possible the end-of-training collection of data from participants. Since the data items to be collected from fellows were almost identical to those collected from participants, this correspondence was an obvious advantage.

Another advantage of our definition of target universe was that

this universe was small enough to allow us to survey it all rather than draw a sample. And censusing eliminates the need for generalization and the entire range of methodological problems associated with statistical surveys.

3.2.2 The Fellows Questionnaire

Instrumentation for the Fellows Survey was developed with the almost exclusive intent of having it conform to the needs of the profile format for fellowship programs. The single exception to this otherwise hard and fast rule was the inclusion on the instrument of an item series (see item 4 on the copy of the questionnaire which follows) which would allow program administrators to trace any change in a given fellow's career intentions between the beginning and end of his fellowship study.

The remaining six items (numbers 1 through 3 and 5 through 7) respond directly to the information requirements of the "Participant Data" and "Response Data" portions of the profiles (see Section 3.1) and incorporate the designated modifications in and additions to the questions addressed to participants in the institute programs. Once these changes were made, the instrument was pre-tested and refined to reflect the results of the pre-test. It was then submitted for OMB clearance along with the cover letter.

3.2.3 Survey Procedures and Response

Prior to receiving OMB clearance, letters of announcement were sent to the directors of each of the fellowship programs whose participants were to be surveyed. The purpose of the survey was explained, and they were asked to submit a list of the names and addresses of all 1970-71 two-year fellows currently enrolled in their second year of fellowship study. We believe that we owe much of the success of the survey to these fifty program directors, all of whom complied promptly with our request. Once clearance was received, each of the fellows was sent a copy of the cover

SURVEY OF EPDA-E GRADUATE FELLOWS

1. One of the requirements of the Education Professions Development Act is to train personnel to meet critical shortages in higher education. Since one of these shortages is the need for minority group members in professional positions, it is significant to know whether or not minority group members are in fact being recruited and trained. For this reason, please indicate:

   A. Whether or not you are a member of a minority group:

      Yes
      No

   B. and, if you are, of which group you are a member:

      American Indian
      Negro/Black
      Spanish-surnamed
      Other (specify)

2. Prior to entering this degree program, were you employed in a professional capacity by an institution of higher education?

      Yes
      No

3. Are you currently planning a career in higher education?

      Yes
      No

   If your answer to number 3 was yes, please indicate your primary intended occupation

      Teacher
      Administrator
      Education Specialist

   and the type of institution at which you intend to work

      2-year junior, community, or technical college
      4-year undergraduate institution only
      graduate and undergraduate college or university

4. At the time you entered this degree program, were your career intentions the same as now?

      Yes
      No

   If not, please indicate the occupation and type of institution you were considering then

/continued....

SURVEY OF EPDA-E GRADUATE FELLOWS -- continued

A. Occupation

Teacher
Administrator
Education Specialist

B. Institution Type

2-year junior, community, or technical college
4-year undergraduate institution
graduate and undergraduate college or university

5. Do you intend to continue full-time graduate study following completion of this fellowship program?

Yes
No

6. Were you aware of the availability of EPDA-E fellowships for your field of concentration before you applied to the institution where you are now studying?

Yes
No

If yes, please indicate which decision this knowledge influenced

Decision to attend this institution
Decision to pursue a career in higher education
Neither

If no, did you modify your career plans after learning that EPDA-E fellowships were available at your institution?

Yes
No

7. Please rate each of the following aspects of the fellowship program according to the scale:

1 = outstanding
2 = very good
3 = good
4 = adequate
5 = poor

Applicability of course work
Applicability of internship
Overall program quality

letter and the questionnaire as well as an addressed, pre-paid envelope. This first-wave mailing took place in June 1972. Non-respondents were identified through the use of coded numbers identifying the program and the fellow, and in July 1972 the second wave was mailed. Within three weeks we had reached an 82% response rate. We therefore saw no need for a telephone survey of a sample of the remaining non-respondents, as had been planned. Average rate of response per program was 83%, with twenty programs having 100% return. The final response rate, with a total of 304 returns, was 85%.

3.3 Summarizing the Profiles

Since the purpose of the profiling task was to enable administrators to have an understanding of the overall accomplishments of EPDA V-E training activity as well as of the activities of individual programs, the computer programs which generated the profiles also generated a series of Summary Tables which show the distribution of both programs and participants along a number of dimensions. The format of these tables is less rigid than that of the profiles, as it was designed for easy readability. Another consideration in its design was to provide a mechanism by which the user could delete or add tables. Thus the Summary Tables contained in Appendices A.2 and B.2 are not the only ones which the system can generate. They do, however, reflect what we understood to be the major concerns of program administrators.

As they appear in Appendices A.2 and B.2, the Summary Tables have been organized in series, each of which represents a different set of data or concerns. The first table, Table A, shows the average and range of several continuous variables related to program size and cost in order to provide administrators with a context for reading the individual profiles. Series B, on the other hand, sets the stage for reading the remainder of the profiles, showing the breakdown by type of program of the number of programs funded, the number of participants approved in these programs, and the total federal amount awarded to them. Series C

shows the breakdown of these same three variables depending on the occupational category and institutional level for which participants were trained. The fourth series, D, summarizes service to disadvantaged populations. Series E informs the user about certain characteristics of the institutions which hosted the programs, while both Series G and H indicate backgrounds and career intentions of participants in these programs. Series F, on the other hand, shows the variation in cost per participant per week depending on each of several variables. Series I through K summarize the reactions of participants to the programs by classifying their ratings according to whether or not they intended to pursue a career in higher education, the type of institution hosting the program, and the type of program in which they were trained. Finally, Series L and M, which apply only to fellowship programs, summarize change in the participants' career plans and the influence exerted by EPDA V-E fellowships in the formation of these plans.

The following pages, on which is presented a Listing of Summary Tables, give a more complete description of the tables.

LISTING OF SUMMARY TABLES

TABLE NO.	TITLE	EXPLANATION	APPLICATION (If Not For Both Types of Programs) I	F

G.1	Number Respondents by Minority Status and Sex	Shows breakdown	X	X
G.2	Number Respondents by Highest Degree and Prior Professional IHE Experience		X	X
H.1	Number Respondents by Intents for Graduate Study and IHE Career		X	X
H.2	Intent to Pursue IHE Career by Sex and Minority Status	Shows breakdown by race and sex of those who intend to pursue career in higher education	X	X
H.3	Reported IHE Career Plans by Occupation and Institution	Shows breakdown of respondents' reported occupational and institutional career plans	X	X
H.4	Number of Respondents by Training Occupation and Preference	Show how respondents' reported occupation and institutional career objectives compare with occupation and institution level for which they were trained.	X	X
H.5	Number of Respondents by Institution Level and Personal Preference		X	X

LISTING OF SUMMARY TABLES (continued)

TABLE NO.	TITLE	EXPLANATION	APPLICATION (If Not For Both Types of Programs)	
			I	F
I.1	Quality of Curriculum (Applicability of Course Work) by Program Type	Entries in parenthesis appear on fellows' tables; those without appear on institute programs. Show number of participants assigning each level of rating to those aspects in each type of program.	X	(X)
I.2	Quality of Staff (Applicability of Internship) by Program Type		X	(X)
I.3	Quality of Facilities (Overall Program Quality) by Program Type		X	(X)
J.1	Quality of Curriculum by Type of Host Institution	Show variations in ratings depending on level of institution hosting program.	X	
J.2	Quality of Staff by Type of Host Institution		X	
J.3	Quality of Facilities by Type of Host Institution		X	
K.1	Quality of Curriculum (Applicability of Course Work) by Intent to Pursue IHE Career	Show variation in ratings given depending on whether or not respondent rating program reported on intents to pursue carrer in higher education.	X	(X)
K.2	Quality of Staff (Applicability of Internship) by Intent to Pursue IHE Career		X	(X)
K.3	Quality of Facilities (Overall Program Quality) by Intent to Pursue IHE Career		X	(X)
L.1	Change in Career Plans by Current Intent	Shows breakdown of fellows' reported intent to pursue IHE career by whether or not their plans have changed since entering program.		X
L.2	Current Occupational Intention by Initial Intention	Traces direction of changes in plans according to initial and current occupational plans.		X
L.3	Current Institutional Intention by Initial Intention	Traces direction of change in plans according to initially and currently planned institution level.		X

LISTING OF SUMMARY TABLES (continued)

TABLE NO.	TITLE	EXPLANATION	APPLICATION (If Not For Both Types of Programs)	
			I	F
M.1	Knowledge of EPDA VE by Intended Career	Shows number of respondents broken down by whether or not they intend to pursue IHE career by whether or not they knew about the availability of EPDA V-E prior to deciding to attend the school hosting their fellowship program.		X
M.2	Intended Career in IHE by Choice Influenced by EPDA	Shows whether knowledge of EPDA influenced choice of school, choice of career, or neither; broken down by intent to pursue IHE career.		X
M.3	Career Intent by Change after Learning about EPDA V-E	Shows respondents who learned about EPDA after choosing school, number broken down by whether or not they modified career plans because of EPDA and whether or not they intend an IHE career.		X

APPENDIX A: COMPUTER OUTPUT FOR INSTITUTE PROGRAMS.

This Appendix is in three parts as follows:

A.1 Program Profiles

A.2 Summary Tables

A.3 Program Listing

A.1: Program Profiles

BASIC PROGRAM DATA

PROGRAM NO.: 7025930, A NEW INSTITUTE PROGRAM IN TO TRAIN TEACHERS + ED SPECIALIST TO SERVE IN 2-YR COLLEGES. BEGAN: 9/ 1/70 AND ENDED: 7/ 5/71.

THE PROGRAM IS SPECIFICALLY DESIGNED TO PREPARE PERSONS TO WORK WITH EDUCATIONALLY AND SOCIOECONOMIC. DISADVANTAGED STUDENTS. PRIMARY TARGET GROUP: AMERICAN NEGRO

INSTITUTIONAL DATA

HOST IS ESSEX COUNTY COLLEGE , A NON-DEVELOPING PREDOMINANTLY WHITE 2-YR COLLEGE IN NEW JERSEY .

PROGRAM COST DATA -- TABLE I

APPENDIX B: COMPUTER OUTPUT FOR FELLOWSHIP PROGRAMS.

This Appendix is in three parts as follows:

B.1 Program Profiles

B.2 Summary Tables

B.3 Program Listing

B.1: Program Profiles

BASIC PROGRAM DATA

PROGRAM NO.: 69000431. A CONTINUING 2-YR FELLOWSHIP PROG. IN ACADEMIC SUBJECTS TO TRAIN TEACHERS TO SERVE IN 2-YR COLLEGES

DEGREE AWARDED: MASTERS

THE PROGRAM IS NOT SPECIFICALLY DESIGNED TO PREPARE PERSONS TO WORK WITH EDUCATIONALLY AND SOCIOECONOMIC. DISADVANTAGED STUDENTS.

INSTITUTIONAL DATA

HOST IS GEORGIA SOUTHERN COLLEGE : A DEVELOPING PREDOMINANTLY WHITE UNIVERSITY IN GEORGIA

PROGRAM COST DATA -- TABLE I

TOTAL PCT	0.00	0.00
ONE YEAR	8 *	8 *
TOTAL PCT	16.00	16.00
TWO YEAR	42	42
TOTAL PCT	84.00	84.00
TOTAL	50	50
TOTAL PCT	100.00	100.00

* As was pointed out in section 2.1 of this volume, all of the fellowship programs sampled were two-year programs. However, eight of them were erroneously reported (on the EPDA V-E Subsystem tape) as being one-year programs. Throughout these tables, therefore, entries for one-year programs in fact should be listed with two-year programs.

APPENDIX C: LIST OF VARIABLES

Note: Variables are numbered in order of appearance on Profile Format (a copy is attached to this List).

LIST OF PROFILING

VARIABLES

BASIC PROGRAM DATA

No.	Name	Description
1	IPNO	Program Number
2	ISTAT	Program Status (i.e., new or continuing)
3	IPROG	Program Type
4	IACA	Academic Area
5	IOCC	Occupation for which training is given
6	ILVL	Level of institution in which persons are being prepared to serve
7	IDB	Date program begins *
8	IDE	Date program ends *
9	IDGRE	Degree awarded **
10	IDIS	Disadvantaged status-Whether or not training is designed to prepare persons to work with disadvantaged students
11	ITRGT	Primary target group if IDIS is yes

INSTITUTIONAL DATA

12	INAM	Name of institution hosting program
13	IDEV	Status-developing or non-developing-of host institution
14	IETH	Predominant ethnic composition-white or non-white-of host institution
15	IHTL	Level of host institution
16	ILOC	State in which host institution is located

* Do not apply to fellowship programs

** Applies only to fellowship programs

COST DATA

No.	Name	Description	
17	[illegible]	No. participants requested	
18	[illegible]	No. normal work weeks requested	*
19	[illegible]	Total federal funds requested	*
20	[illegible]	Non-federal contribution included in program's proposal	*
21	[illegible]	Cost/participant week based on costing in proposal	*
22	[illegible]	No. participants approved	
23	[illegible]	No. normal work weeks approved	*
24	[illegible]	Amount of grant	*
25	[illegible]	Total non-federal contribution budgeted	*
26	[illegible]	Cost/participant week based on terms of grant	*
	[illegible]	(appears in capsule)Total amount of federal and non-federal funds	

PARTICIPANT DATA

27	[illegible]	Participant sex
28	[illegible]	Participant race
29	[illegible]	Highest degree held prior to EPDA V-E
30	[illegible]	Prior professional [illegible] experience
31	[illegible]	Intent to pursue career in higher education
32	[illegible]	Of those who do intend career in higher education, number who intend to enter full-time graduate study following completion of EPDA V-E training

*Do not apply to fellowship programs

33	KOL21	Whether or not fellow know about availability of EPDA V-E funds in advance of making decision to attend host institution
34	KOL	If fellow knew about EPDA V-E funds in-advance of choosing institution, whether this knowledge influenced choice of school, career or neither
35	KOL23	If he did not know at that time, did he modify career plans when he found out
36	IHELV	Level of institution in which participant intends to serve
37	IOC	Type of position which participant intends to hold

RESPONSE TO PROGRAM

38	ICUR	For institute programs, ratings given Quality of Curriculum; for fellowships, ratings given Applicability of Course Work
39	ISTF	Institute programs: ratings given Quality of Staff Fellowship programs: ratings given Applicability of Internship
40	IFAC	Institute programs: ratings given Quality of Facilities Fellowship programs: ratings given Overall program quality
41	FRSUM	Summary of ratings given by field readers

* These items apply only to fellowship programs

PROGRAM PROFILE

330

BASIC PROGRAM DATA

PROGRAM NO., 1, A 2 3

IS 4 TO TRAIN 5

TO SERVE IN 6, BEGAN 7 AND

ENDED: 8, DEGREE AWARDED: 9.

THE PROGRAM IS 10 SPECIFICALLY DESIGNED TO PREPARE PERSONS TO WORK WITH EDUCATIONALLY AND SOCIOECONOMICALLY DISADVANTAGED STUDENTS.

PRIMARY TARGET GROUP: 11.

INSTITUTIONAL DATA

HOST IS 12, A 13, 14, 15, IN 16.

PROGRAM COST DATA -- TABLE 1

	NO. OF PARTICIPANTS	NO. OF NORMAL WORK WKS	TOTAL GRANT	NON-FED CONTRIBUTION	COST/ PARTICIPANT/ WEEK

70-80			Fellowship No.

APPENDIX E: USER'S GUIDE

PROGRAM GUIDE

PROGRAM: Profile

PURPOSE: A: Generates individual program summaries for fellowship or institute programs.

B: Aggregates these summaries across programs to produce a set of user defined summary statistics.*

INPUTS: A: Program data:

Cards 1, 2, and 3 for each program**

B: Participant data:

{Card 4 if programs are institutes**
{Card 5 if programs are fellowship**

These data are packed directly after the program deck, and must be in the following order: (see Figure 1)

a. Each program must have cards 1, 2, and 3. Even if one of the cards is missing most or all values, it must be inserted as a spacer.

b. Card 3 for each program is followed by as many respondent cards as desired. (Respondents are cards 4 and 5.)

c. Each program, even if it has no respondents, must be terminated by a card with a "5" punched in col. 20.

d. The sequence a, b, c is repeated for each program.

---

* A set of summary definitions is provided with the program. To generate new ones, see "Program Modification", page 15.

** See CODEBOOK for the format of these cards.

- { control card 3, last table

CONTROL CARDS:

At the end of the data the user may place control cards defining the format of the summary tables.

After the last data card (which will be blank except for "5" in column 20 to indicate the end of a program deck) place 3 cards with "9" punched in every column to signal the end of regular processing and begin the output of summary tables.

After these cards, place 3 control cards for each table to be printed. These three cards contain the following information:

Card No.	Column No.	Description
1	1-2	Table number
	3	Card number (in this case, 1)
	4	Print code
		(1) Table will be printed only for fellowship programs.
		(2) Table will be printed for both fellowship and institute programs.
		(3) Table will be printed only for participant programs.
1	5-6	Blank
	7-80	Table title
2	1-2	Table number
	3	Card number (in this case "2")
	4	Percent code
		(0) No percents will be printed
		(1) % of column totals will be printed
		(2) % of row totals will be printed
		(3) % of table total will be printed
		Any combination of the above can be printed by entering the sum of the desired codes. If no code is entered, 7 is assumed, and row, column, and total percents are all printed.

Card No.	Column No.	Description
2	5-6	Number of columns*
	7-80	Column headings: columns are nine spaces wide. Any printable character may be used in these headings.
3	1-2	Table number
	3	Card number (in this case "3")
	4	Blank
	5-6	Number of rows*
	7-80	Row headings: row headings are also given nine spaces, and, as for column headings, any printable character may be used.

There must be exactly 3 control cards for each table. Any other arrangement will result in incorrect labeling, or worse.

PROGRAM CHARACTERISTICS:

"Profile" is written for the CDC 6000 series computing system, using FORTRAN IV, version 3. It compiles and executes in a field length of approximately 25,000 words (60 K_8). As a rule of thumb, execution time may be estimated at 1.2 seconds/program, although time will vary somewhat with number of programs and number of participants per program. Current DIMENSION statements allow the accumulation of 55 summary tables. This statement may be changed to incorporate more tables.

---

* There are eleven columns and rows allowed for any table. Up to the first ten may contain values of the desired variable; the eleventh is reserved for accumulating non-response.

OUTPUT:

Program Profile has two types of output:

Each program produces a one-page capsule summary presenting key management-oriented information about that program.

In addition, the program accumulates and displays summary information which provides analytic data for the entire sample of programs.

Both of these types of output are discussed more fully in the next section.

OUTPUT GUIDE

PROFILES

For each program in the data deck, a profile is printed according to the specified format. Figure 3 (see following page) provides a skeleton profile to demonstrate this format, and indicates the location of each variable by number. Basically, the profile format divides each profile into six sections, as follows:

(1) Basic Program Data, which serve to identify the program and describe its goals;

(2) Institutional Data, which identify and describe the institution hosting the program;

(3) Cost Data, which apply primarily to institutes, short-term training programs, and special projects and which include a set of figures taken from the program's application for funds and a set taken from the grant (OE Form 1185);

(4) Participant Data, which summarize basic socio-economic and career data of all participants responding either through the Fellows Survey (and Application for Graduate Fellowship OE Form No. 1048) or through the Participant Application and Evaluation Forms, OE Nos. 1186-1 and 1216 , respectively.

(5) Response Data, which summarize the ratings given by participant-respondents and by the Field Readers.

(6) The Capsule, which presents a nutshell description of the program for quick reference.

In general, the Profile format is self-explanatory. However, we take this opportunity to make several points in order to assist the user. First of all, when alphabetic variables are missing, the term "not specified" appears. For example, if program type (IPROG) were missing, the first line of the Basic

4-YR COLLEGE	0	0	0	0	0
UNIVERSITY	0	0	0	0	0
UNSPECIFIED	0	0	0	0	0
TOTAL	0	0	0	0	0

Program section would read: "Program No. 6903311, a continuing not specified program in...," rather than "Program No. 6903311, a continuing institute program in." In a few cases, such as occupation for which training is given (IOCC), where using the term "not specified" seemed inappropriate, the space is left blank. Missing numeric variables, primarily those in the Cost Data section, are treated in one of two ways. If the entry was "0," the profile prints "0.0"; if there was no entry for the case, the profile prints "-0.0."

Second, the reader may find it helpful to note that several variables apply only to one type of program as follows:

- Applicable only to institutes, short-term training programs and special projects: date program began (IDB) and ended (IDE) all cost data (except number of participants awarded).

- Applicable only to fellowship programs: degree awarded (IDGRE) and variables 33 through 35.

Third, data from the fellows' Application and Nomination for Graduate Fellowship were inputted only for those fellows who responded to our survey. On the other hand, all available participant (in institutes, short-term training programs and special projects) data were inputted, even where program files contained only one of the two forms used by this group. In some cases the entire set of one form or the other was missing for a program.

Fourth, the tight spatial constraints necessitated by the profiling format dictated the use of several abbreviations. Generally, these abbreviations are self-explanatory, although several depart from the terminology otherwise used.

(1) "Gen'l Program Quality," which appears on the fellowship profiles, is in fact "overall program quality" (Variable No. 40, IFAC);

(2) "No. Trained," which appears in the capsule and is the same as "number of participants approved" (Table I, Program Cost Data, Variable No. 22, INOPA). The use of this term is somewhat misleading since apparently the number of persons who actually were trained in a given program is not infrequently different from the number of participants approved. We must warn the user, therefore, to consider this and the other "approved" figures with a grain of salt, since there is no positive proof that what was approved is identical to what happened.

Similar reservations apply to the Participant Data section, which summarizes data submitted by respondents and can in no way account for non-respondents. Furthermore, career data in this section are the reported plans of respondents, and may not be at all representative of their actual post-EPDA activities.

THE SUMMARY TABLES

The summary crosstabulations are preceded by a listing of the mean, minimum, and maximum values received by each of several continuous variables. This list, the crosstabs and the breakdowns by program type are described in greater detail in the attached Listing of Summary Tables, which identifies the variables used in each table and the application of each (i.e., for fellowship or institute programs, or both).

Where one variable in a crosstab is missing, neither is counted. Thus, in Table 1, if we know a program is training teachers but do not know for what institutional level they are being prepared, this program would not be counted in the table. Such cases are accumulated by the profile program and if the user so specifies, they will appear in the eleventh and twelfth columns or rows. Where the coding of a variable includes "not specified," cases so coded appear in the table in the column or row titled "not specified" or unspecified.

Missing data for continuous variables are, of necessity, excluded from totals and averages.

Cost per participant week is computed as an average by the following formula:

- In a single program,

$$CPW = \frac{FUNDA + XFEDA}{INOPA \times INOWWA}$$

- $$\text{Average CPW} = \frac{\text{cost/participant}_1 + \text{cost/part.}_2 + \ldots \text{cost/part.}_n}{\text{no. participant weeks}}$$

Further confusion may be eliminated by the following explanations of certain terms:

- Training occupation (IOCC) is the occupation in which the program was designed to train persons;

- Training institution and training institution level (ILVL) refer to the level (2-year, 4-year, etc.) of institution in which participants were prepared to serve;

- Preferred/intended occupation or institution (IOC and IHELV, respectively) refer to the occupation and institution level which the respondent reported as his preference.

- Institution status and ethnicity (IDEV and IETH) apply to the IHE hosting the program; the first indicates whether it is a developing or non-developing institution and the second whether its student body is primarily white or non-white.

- Minority status (IRC) is a participant-specific variable identifying the participant's ethnic background.

- Disadvantaged status (IDIS) refers to whether or not a program is designed specifically to prepare persons to work with disadvantaged students.

In each table the horizontal variable is named before the vertical variable.

LISTING OF SUMMARY TABLES

TABLE NO.	TITLE	EXPLANATION	APPLICATION (If Not For Both Types of Programs) I	F
A	Minimum, Mean, Maximum	Displays mean and ranges of values of several continuous variables.	X	X
B.1	Program Type	Shows breakdown of number of programs by program type.	X	X
B.2	Program Type	Shows breakdown of number of participants approved by program type.	X	X
B.3	Program Type	Shows breakdown of total federal funds awarded by program type. (Does not appear for fellowship programs since cost varies in direct relation with program type and size.)	X	
C.1	Number of Programs by Institution and Occupation	These show breakdown by the institution level and occupation category for which participants were trained.	X	X
C.2	Number of Participants by Institution and Occupation		X	X
C.3	Total Federal Investment by Institution and Occupation		X	X
D.1	Was Program Specifically Designed to Train for Disadvantaged	These show: .1 number of programs; .2 number of participants approved; .3 federal investment; .4 number minority respondents; .5 number of non-white host institutions. Broken down by the reported primary target group	X	X
D.2			X	X
D.3			X	
D.4			X	X
D.5			X	X
D.6	Primary Target Group of Programs Serving Disadvantaged	These show: .1 number of programs; .2 number of participants approved; .3 federal investment; .4 number minority respondents; .5 number non-white host institutions. Broken down by the reported primary target group	X	X
D.7			X	X
D.8			X

TABLE NO.	TITLE	EXPLANATION	APPLICATION (If Not For Both Types of Programs) I	F
E.1	Number of Programs Funded by Institution and Ethnicity	Show breakdowns of white/non-white and developing/non-developing host institutions	X	X
E.2	Total Amount Federal Grants by Institution and Ethnicity		X	X
F.1	Average Cost/Participant Week by Program Type and Size.	These tables compute average CPW as: $\frac{CPW_1 \quad CPW_2 \ldots\ldots CPW_n}{\text{\# participant weeks}}$ *participant week = (INOPA) (INOWWA)	X	
F.2	Cost/Participant Week by Occupation and Institution Level.		X	
F.3	Cost/Participant Week by Disadvantaged Status and Program Type.		X	
F.4	Cost/Participant Week by Status and Level of Host Institution.		X	
G.1	Number Respondents by Minority Status and Sex	Shows breakdown	X	X
G.2	Number Respondents by Highest Degree and Prior Professional IHE Experience		X	X
H.1	Number Respondents by Intents for Graduate Study and IHE Career		X	X
H.2	Intent to Pursue IHE Career by Sex and Minority Status	Shows breakdown by race and sex of those who intend to pursue career in higher education	X	X
H.3	Reported IHE Career Plans by Occupation and Institution	Shows breakdown of respondents' reported occupational and institutional career plans	X	X
H.4	Number of Respondents by Training Occupation and Preference	Show how respondents' reported occupation and institutional career objectives compare with occupation and institution level for which they were trained.	X	X
H.5	Number of Respondents by Institution Level and Personal Preference		X	X

LISTING OF SUMMARY TABLES (continued)

TABLE NO.	TITLE	EXPLANATION	APPLICATION (If Not For Both Types of Programs) I	F
I.1	Quality of Curriculum (Applicability of Course Work) by Program Type	Entries in parenthesis appear on fellows' tables; those without appear on institute programs. Show number of participants assigning each level of rating to those aspects in each type of program.	X	(X)
I.2	Quality of Staff (Applicability of Internship) by Program Type		X	(X)
I.3	Quality of Facilities (Overall Program Quality) by Program Type		X	(X)
J.1	Quality of Curriculum by Type of Host Institution	Show variations in ratings depending on level of institution hosting program.	X	
J.2	Quality of Staff by Type of Host Institution		X	
J.3	Quality of Facilities by Type of Host Institution		X	
K.1	Quality of Curriculum (Applicability of Course Work) by Intent to Pursue IHE Career	Show variation in ratings given depending on whether or not respondent rating program reported on intents to pursue carrer in higher education.	X	(X)
K.2	Quality of Staff (Applicability of Internship) by Intent to Pursue IHE Career		X	(X)
K.3	Quality of Facilities (Overall Program Quality) by Intent to Pursue IHE Career		X	(X)
L.1	Change in Career Plans by Current Intent	Shows breakdown of fellows' reported intent to pursue IHE career by whether or not their plans have changed since entering program.		X
L.2	Current Occupational Intention by Initial Intention	Traces direction of changes in plans according to initial and current occupational plans.		X
L.3	Current Institutional Intention by Initial Intention	Traces direction of change in plans according to initially and currently planned institution level.		X

LISTING OF SUMMARY TABLES (continued)

TABLE NO.	TITLE	EXPLANATION	APPLICATION (If Not For Both Types of Programs)	
			I	F
M.1	Knowledge of EPDA VE by Intended Career	Shows number of respondents broken down by whether or not they intend to pursue IHE career by whether or not they knew about the availability of EPDA V-E prior to deciding to attend the school hosting their fellowship program.		X
M.2	Intended Career in IHE by Choice Influenced by EPDA	Shows whether knowledge of EPDA influenced choice of school, choice of career, or neither; broken down by intent to pursue IHE career.		X
M.3	Career Intent by Change after Learning about EPDA V-E	Shows respondents who learned about EPDA after choosing school, number broken down by whether or not they modified career plans because of EPDA and whether or not they intend an IHE career.		X

Note: Program Creation was written and used to retrieve data from the EPDA V-E Subsystem Data Tape and to punch cards 1 and 2 for Program Profile.

APPENDIX F: LISTING OF PROGRAM CREATION

MODIFYING THE PROGRAM

Those parts of program Profile which compute statistical summary tables have been specifically designed to allow easy modification of the FORTRAN coding. Any desired variables may be added or substituted to create additional tables by changing the table specifications contained in the program. COMMENT cards are inserted in the program to indicate the appropriate modification points.

The following information will be useful to programmers wishing to understand the structure of program Profile:

- Summary tables are stored in array ITABLE.
- ITABLE is a 3-dimensional structure in which the horizontal and vertical axes of the table are the first two subscripts.
- IVERTC is a vector whose subscript is table number and whose values are the vertical axes of the respective tables.
- HORIZN is a similar vector for horizontal axes.
- IACUM is a vector whose subscript is table number and whose value is the weight to be assigned to a case for that table. Usually the weight is 1, but it can also be the number of program participants, a funding amount, or any other variable defined by a FORTRAN expression.

New tables are defined by the insertion of cards which say (for example)

```
IVERTC (IZ) = (INOPR+7) / 15
HORIZN (IZ) = IDEV
IACUM (IZ)  = FUNDA
```

which will result in a table accumulating approved funding level, given a program's developing/non-developing status and the number of participants requested, rounded to the nearest multiple of 15.

Note that there are two sets of table specifications: the first set deals with program level variables, the second with participant level variables. The two kinds of variables <u>may</u> be intermixed, in which case, they should be grouped with participant level variables.
